#### **DETAILED ACTION**

1. Claims 3, 4, 7, 8, 15, 16, 19, and 20 are now pending in this application. Claims 3, 4, 7, 8, 15, 16, 19, and 20 were objected to for being dependent upon a rejected base claim. Claims 3, 4, 7, 8, 15, 16, 19, and 20 have been rewritten into independent form. Therefore, the objection and rejections concerning claims 3, 4, 7, 8, 15, 16, 19, and 20 have been reconsidered and withdrawn.
2. Claims 1, 2, 5, 6, 9 - 14, 17, 18, 21, and 22 have been cancelled.

#### ***Allowable Subject Matter***

3. Claims 3, 4, 7, 8, 15, 16, 19, and 20 have been allowed. The following is a statement of reasons for the indication of allowable subject matter:

For claim 3, none of the prior art of record teaches an inkjet print head comprising: at least one nozzle chamber, having a nozzle aperture defined in one wall thereof for the ejection of printing fluid out of said aperture, a printing fluid supply channel interconnected with said nozzle chamber; and a printing fluid droplet tail release guide arrangement having disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement comprises a bar of essentially triangular cross-section a base of which rests on an inner surface of said nozzle chamber and a pointed edge of which protrudes towards the center of said aperture said bar further extending along said inner surface inwards of said nozzle chamber.

For claim 4, none of the prior art of record teaches an inkjet print head comprising: at least one nozzle chamber, having a nozzle aperture defined in one wall thereof for the ejection of printing fluid out of said aperture, a printing fluid supply channel interconnected with said nozzle chamber; and a printing fluid droplet tail release guide arrangement having disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement comprises a pointed structure of essentially pyramidal shape a base of which rests on an inner surface wall of said nozzle chamber and a pointed tip of which protrudes towards the center of said aperture.

For claim 7, none of the prior art of record teaches an inkjet print head comprising: at least one nozzle chamber, having a nozzle aperture defined in one wall thereof for the ejection of priming fluid out of said aperture, a printing fluid supply channel interconnected with said nozzle chamber; and a printing fluid droplet tail release guide arrangement having disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement comprises a recessed section of essentially triangular shape in an inner surface wall of said nozzle chamber a base of which rests in the plane of said aperture and a point of which is directed inwards of said nozzle chamber.

For claim 8, none of the prior art of record teaches an inkjet print head comprising: at least one nozzle chamber, having a nozzle aperture defined in one wall thereof for the ejection of printing fluid out of said aperture, a printing fluid supply channel interconnected with said nozzle chamber; and a printing fluid droplet tail release guide arrangement having disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement comprises a recessed section of essentially triangular pyramidal shape in an inner surface wall of said nozzle chamber a base of which rests in the plane of said aperture and a point of which is directed inwards of said nozzle chamber.

For claim 15, none of the prior art of record teaches a method for increasing droplet placement accuracy in an inkjet print head having at least one nozzle chamber with a nozzle aperture defined in one wall thereof for the ejection of printing fluid out of said aperture, comprising providing a printing fluid droplet tail release guide arrangement disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement is a bar of essentially triangular cross-section such that a base thereof will rest on an inner surface of said nozzle chamber and such that a pointed edge thereof protrudes towards the center of said aperture and directing said bar such that it extends along said inner surface inwards of said nozzle chamber.

For claim 16, none of the prior art of record teaches a method for increasing droplet placement accuracy in an inkjet print head having at least one nozzle chamber with a nozzle aperture defined in one wall thereof for the ejection of printing fluid out of said aperture, comprising providing a printing fluid droplet tail release guide arrangement disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement is a pointed structure of essentially pyramidal shape such that a base thereof rests on an inner surface wall of said nozzle chamber and such that a pointed tip thereof protrudes towards the center of said aperture.

For claim 19, none of the prior art of record teaches a method for increasing droplet placement accuracy in an inkjet print head having at least one nozzle chamber with a nozzle aperture defined in one wall thereof for the ejection of printing fluid out of said aperture, comprising providing a printing fluid droplet tail release guide arrangement disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement is a recessed section of essentially triangular shape in an inner surface wall of said nozzle chamber such that a base thereof rests in the plane of said aperture and a point thereof is directed inwards of said nozzle chamber.

For claim 20, none of the prior art of record teaches a method for increasing droplet placement accuracy in an inkjet print head having at least one nozzle chamber

with a nozzle aperture defined in one wall thereof for the ejection of printing fluid out of said aperture, comprising providing a printing fluid droplet tail release guide arrangement disposed on a predetermined position of an edge of a circumference of said aperture, wherein said printing fluid droplet tail release guide arrangement is a recessed section of essentially triangular pyramidal shape in an inner surface wall of said nozzle chamber such that a base thereof rests in the plane of said aperture and a point thereof is directed inwards of said nozzle chamber.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
